

ABSTRACT

A disposable, deodorant and splash proof urine dispersing device for placement in a urinal including a framework made of scented plastic material with a horizontal segmented supporting base and a central raised housing. The supporting base includes a plurality of perforated flexible segments and a central bottom frame with a central opening aligned with an outlet or drain in the urinal. The opening is surrounded by the multiple segments such that the device can flex and adapt to urinals of different sizes and designs. The central raised housing includes a horizontal or inclined top member and an upstanding peripheral wall connecting the top member with the central bottom frame in the supporting base. The peripheral wall includes flush relief openings and tapered for easy unit stacking. The top member includes a frame with a plurality of spaced parallel rods having a unique configuration for dispersing urine flow with reduced back splashing toward the user of the urinal.
